FORLOOP
FOR-M&E Explorer

Are you making the most of your M&E Software? Are you using it to its full potential?

FORLOOP
SMARTER AVIATION
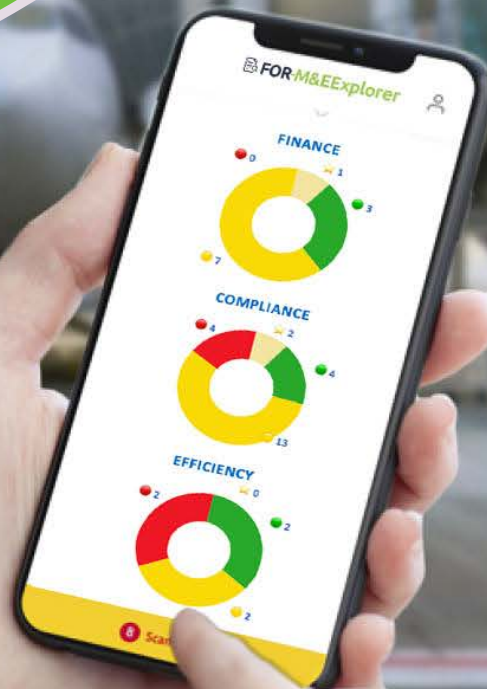

Explore your M&E Software coverage against organisational requirements.

Benchmark the effectiveness of your M&E Software.

Evaluate & assess what is working well and what you can improved.

This innovative tool measures the utilisation of your M&E Software across 8 domains in a typical Maintenance/Engineering organisation. It provides the essential first step towards understanding what areas are working well and what areas can be improved.

FOR-M&E Explorer

- The **M&E Software** (also called MIS or MRO System) is at the heart of an airline's Maintenance & Engineering activities. Airlines invest a great deal of money for buying and maintaining such systems.

- The objective is to implement a standardised process, however oftentimes airlines end up using their M&E Software in varied, sub-optimal ways. Most Airlines and MRO Clients tell us "If we knew then what we know now, we would have gone about it in a different and better way".

With **FOR-M&E Explorer**, you now have a tool to know what others don't, with the benefit of hindsight. The result is accessing opportunities for improvement.

Take the *free trial challenge* to assess and visualize how well your M&E Software is being used in your organisation. In approx. 20 minutes, you will complete all that's needed to get a dashboard style report giving you all the insights you need.
